Arizona Corporation Commission

DOCKETED

I support the proposition that Arizona require as much as possible of our energy to come from clean, renewable energy. If 1% is what's on the table, it's the least we should be doing. Think about making it more. In this state, there's no reason not to use alternative sources.

Susan and Gary Pulis

Gentlemen

4-22-00

We urge you to establish a goal of 1% solar energy in Arizona by no later than the year 2005. Thank you for your consideration of this request.

Sincerely

Tom and Jan Stickney

To the Arizona Corporation Commission:

I am writing to express my interest in promoting the development of renewable energy in Arizona. The voluntary program that has been in place since 1994, has failed to deliver.

I strongly support the Solar and Environmentally Friendly Portfolio Standard, and am willing to pay fifty cents per month to fund it.

Thank you for your time,

Laura Kleman

Dear Mr. Kunasek, Mr. Irvin, and Mr. Mundell,  
My husband and I are very happy to hear of the vote to adopt a Solar and Environmentally Friendly Portfolio Standard and support your voting for the proposal.

Thank you for at least the beginning of some common sense in the use of our resources, and the consideration of the best interests of our state and its well being.

Good luck to you.

Sincerely,  
Patricia Walsh  
Oro Valley

**Subject:** Solar & Environmentally Friendly Portfolio Standard

Dear Corporation Commission members:

I'd like to voice my opinion that we should be doing everything possible to support and promote development of renewable energy in Arizona. It's laughable that we are not doing it already with the amount of sunshine we have in the state! Therefore, I support the Solar and Environmentally Friendly Portfolio Standard AND I am willing to pay 50 cents a month more in order to fund the Portfolio Standard.

I hope that you too will support this initiative.

Thank you,

Rick Shepherd  
Cave Creek, AZ

**Date:** 4/23/00 12:49pm  
**Subject:** Solar energy

Dear Commissioners Kunasek, Irwin, & Mundell:

I recently heard that you are going to reconsider the requirement that at least 1% of Arizona's electrical power be solar generated within the next 5 years. Doubtlessly the suppliers are reluctant to engage in any change that might reduce their short-term profits.

I write to urge you to stick to the plan and support the development of solar energy as a viable alternative energy large scale energy source. The

reality of global warming is now recognized by every reputable scientific body that has looked at this phenomena. CO2 emissions are a major contributor to this huge problem. Arizona is not in a good position to withstand increasing temperatures. We are, however, in a great position to develop technology that will provide reliable energy for our children's children. Please think about them, and not just the self-serving corporate spokesmen, when you make this decision. It is more clear than ever that we have to invest in solar power to deal with the problems of global warming, and also to slow the ever increasing loss of U.S. dollars to other countries that we spend on fossil fuels.

So again, I ask you, please invest in the future and vote to get at least 1% of our electrical power from solar, non-polluting sources within the next 5 years.

Sincerely,

Steve Thompson

Hi-

We are willing to pay another \$.50 each per month to support the Solar and Environmentally Friendly Portfolio.

Although I think that 1% is a pathetic goal--50% would make a little more sense--at least it's a start.

Let's go!

**To:** CC.UTIL(mailmaster)  
**Date:** 4/21/00 9:32am  
**Subject:** Portfolio Standard

Dear Chairman Carl Kunasek,

I live in Page, Arizona, a small town with two large powerplants, one a hydroelectric facility at Glen Canyon Dam and the other the coal-fired Navajo Generating Station. Perhaps more than most Arizonans, those of us living in Page are struck by the negative impacts electrical generation. I, therefore, have built a (partly) passive heating system into my house and, in the summer, rely on a energy-saving evaporative cooler rather than air conditioning.

Because Arizona is still largely rural, natural and unusual beautiful, I would like to keep it as it is. I therefore urge you to do as I have done, harness the sun's energy. In the Portfolio Standard please require that a minimum of 1% of the electrical power sold in our state come from renewable energy sources, especially solar energy which is one of Arizona's wonderful gifts. Please adopt this modest but important 1% requirement towards the preservation of Arizona's clean air and water.

Thank you for your time.

Sincerely,

Gary Ladd

**Date:** 4/21/00 1:16pm  
**Subject:** Corporation Commission Solar Energy vote of April 25

Dear Sirs:

I write to share with you my support for the Solar and Environmentally friendly Portfolio. We are currently overly dependent on fossil fuels, the emissions of which are creating an undeniable build up of carbon and particulates that are likely to raise global temperature. If we are to maintain any semblance of current energy usage, we have no choice but to move to solar and wind power. My personal opinion is that we should target a minimum of 10% of our energy coming from solar & alternatives by the year 2005. Arizona should be a leader in solar technologies. It is both a matter of economics and survival.

Sincerely,

Bryan Bates,  
Science Program Coordinator

**Date:** 4/21/00 1:18pm  
**Subject:** renewable energy

To Whom It May Concern:

I am writing in support of the Solar and Environmentally Friendly Portfolio Standard. The voluntary program for developing renewable energy that has been in place since 1994 has failed to deliver. We need to start mandating that our energy comes from clean, renewable resources! Having clean, renewable energy as a source of 1% of all electricity by 2005 is a good start. I own my home in Flagstaff and would be willing to pay an extra 50 cents per month to fund the Standard. Arizona has great potential for utilizing renewable energy, such as solar power, and we should support the development of these alternative resources.

Sincerely,  
Sarah Jacobs
